

Agenda

- Introduction
- Working with repositories
- Collaborative with others
- Github-Zenodo integration
- Github pages
- Artificial Intelligence answering Github Issues

Github versus gitlab

Github

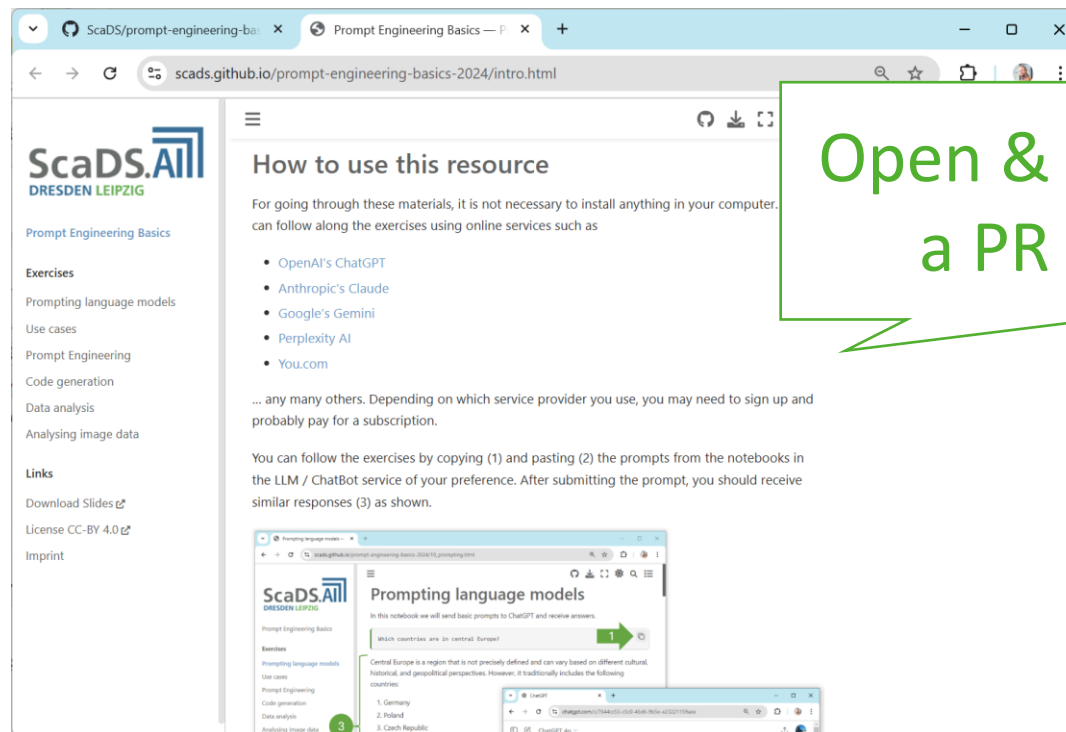

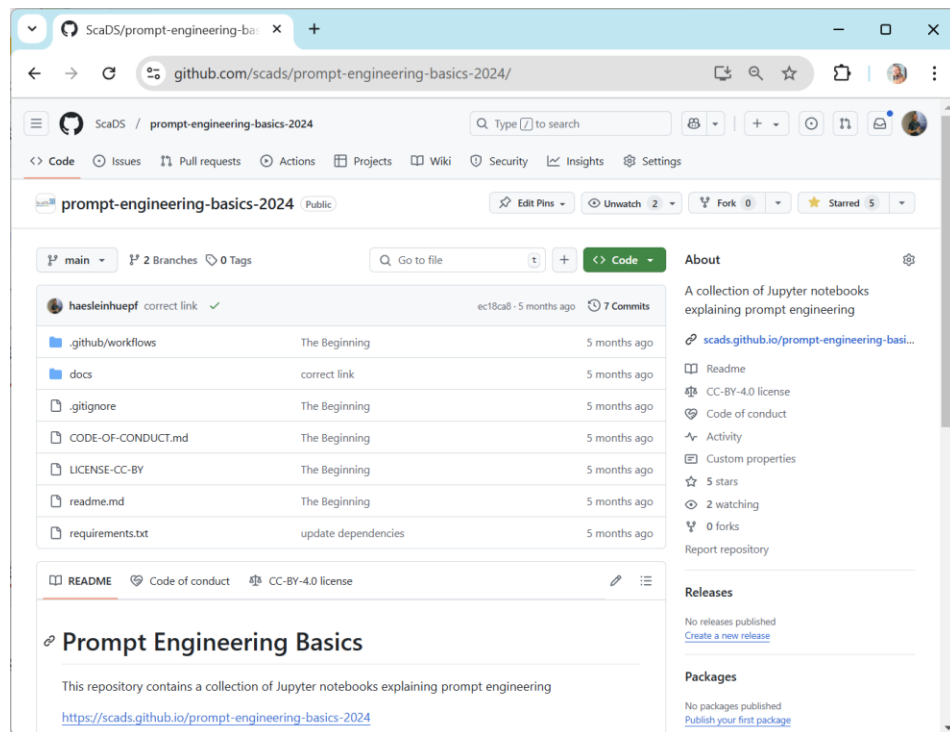

The screenshot shows the GitHub repository page for `haesleinhuepf/git-bob`. The repository is public and has 24 stars, 2 forks, and 2 pull requests. The main branch is `main`. The repository description states: "git-bob uses AI to solve Github-issues. It runs inside the Github CI, no need to install anything on your computer." The file list includes `.github/workflows`, `.gitlab`, `docs`, `src/git_bob`, `tests`, `.gitattributes`, `.gitignore`, `LICENSE`, `README.md`, `logo_32x32.png`, and `logo_64x64.png`. The repository was created on October 19, 2024.

Gitlab

The screenshot shows the GitLab repository page for `Robert Haase / git-bob`. The repository is public and has 0 stars, 0 forks, and 0 pull requests. The main branch is `main`. The repository description states: "git-bob uses AI to solve Github-issues. It runs inside the Github CI, no need to install anything on your computer." The file list includes `.github/workflows`, `docs`, `playground`, `src/git_bob`, `tests`, `.gitattributes`, `.gitignore`, `LICENSE`, `README.md`, and `pyproject.toml`. The repository was created on October 19, 2024.

Findability -> Visibility

- Github pages render Github repository as beautiful websites
- Great documentation becomes increasingly necessary for acquiring funding for data science projects

Open & FAIR sharing is
a PR instrument

- ... leading to more
- reuse of published code
 - citations
 - collaborations
